Sample Minutes:
10/13/2021:
       We wrote out our pseudocode on a whiteboard to understand how our code needed to work and what classes we would need, as well as how these classes would work together. We made sure that our code used the MVC diagram. Design choices were made during this meeting as well. The main choice was to have a Food interface which the five food types would fall under.

11/17/2021:

   We checked in on where we were with our parts of the code. The Food and OType interfaces and their underlying classes were finished, but work needed to be done on the Parser for the Payment class as well as the Ticket class. Once the model classes are done, we can work on getting the Connection and Interface classes working, and then we can finalize our code.
